

HOW TO CREATE DAPP IN 3 STEPS

dApp Builder is a platform to create and edit Ethereum dApps no coding required, similar how Wordpress and Wix building websites

STEP 1.

Select a smart contract 100+ smart contracts

STEP 2.

Edit your smart contract (use code or no coding required) Easy to edit: Input your data, select your logic

STEP 3.

Deploy on dApp Builder hosting, get mobile app and web browser client Publish on iTunes or Google Play app stores and web browser

INDIVIDUALS

- Freelancing (online services)
- Lending an apartment (with a smart lock)
- Escrow for deals with real estate
- Car leasing
- Cryptocurrency as collateral (crypto pawnshop)

BLOCKCHAIN COMMUNITY

- TGE (ICO) contracts
- Creating custom ERC20 tokens
- Affiliate system
- E-commerce
- Online services

LARGE ENTERPRISES

- Delivery of containers
- Internal deals
- Long-term contracts with delayed or step-by-step payment
- Chained contracts (derivatives)
- Multilateral (derivatives)
- Multilateral contracts

SMALL BUSINESS

- Internal trade
- International trade
- Automatic royalty payments
- Ordering services from agencies
- Offline services

BACKGROUND

- ✓ Easy to create Blockchain Application builder for Ethereum dApps with no coding skills, similar to how Wordpress and Wix allow building websites.
- ✓ Users/businesses can easily create decentralized applications.
- ✓ These decentralized applications will be able to launch branded tokens powered by DAP Smart Token.
- ✓ In this case the dApp Builder DAP token will become a Super Token for the blockchain applications with tokens created on the platform.

THE PROBLEMS WE SOLVE

To create dApps we use Smart Contracts

1. Programming experience with Solidity required

Smart Contracts must be developed in Solidity, a experience that very few people have.

2. It's difficult and Complicated

It requires special knowledge and its easy to mix up required functions and properties in Smart Contracts that will make it hard to understand.

Security and dApps exploits is also an issue

3. It's not easy to update Smart Contracts

To customize and maintain smart contracts you need a programmer

SOLUTION: DAPP BUILDER PLATFORM

1. dApp builder

Engine to Build and Deploy Blockchain Applications

2. Smart Contract Marketplace

Listing of Smart Contract Templates Advertise, promote, review Integration with 3rd party services - payment gateways, oracles, etc.

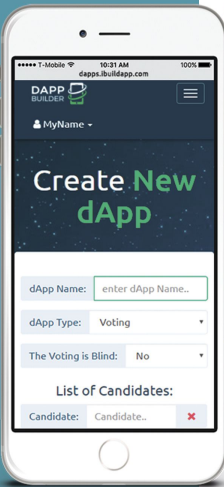

3. Blockchain Application Store

Company page to list blockchain applications for their customers, employees and partners

HOW WE MAKE MONEY

BUSINESS MODEL - charge 2% transaction fees from dApp tokens created on our platform similar to Visa and Mastercard.

- STEP 1: Create dApp and issue custom token
- STEP 2: Distribute to customers
- STEP 3: End users purchase something from our customer dApp
- STEP 4: dApp Builder receives 2% of the purchase amount and the customer dApp receives payment in DAP tokens

BUSINESS MODEL

charge 2% transaction fees from dApp tokens created on our platform similar to Visa and Mastercard.

TOKEN ECONOMICS DAP TOKEN

- ✓ DAP, and its token distribution, will be created around smart contracts built on Ethereum
- ✓ Tokens issued by dApp Builder (DAP) will be used for the access, creation, and deployment of dApps on smart contracts.
- ✓ The DAP token serves as a method of validating the user's interactions with DAP Platform and will allow users to buy, execute, or barter for other smart contracts in the platform.
- ✓ There are two types of tokens on the platform. DAP Platform customers will need to buy the DAP tokens in order to create their own dApps and issue their own tokens. These customer tokens are called custom tokens. The custom tokens cannot be placed on any exchange and will be used in the internal transactions of their dApps.
- ✓ The DAP token will be issued as a smart token, or in other words a programmable token.

TOKEN SALE

Hard cap: 30,000 ETH
ERC20 Token: Yes

Token Main Sale begins in Q1, 2019.
Token Sale Price - \$0.04

DAPP BUILDER IS FOUNDED BY IBUILDAPP MOBILE APP BUILDER, ITS EXECUTIVES AND INVESTORS

Rafael Soutanov, the CEO of dApp Builder is the founder of Android/iPhone App builder - <http://ibuildapp.com>

Since launching in 2011, BuildApp Mobile Builder received over 50M downloads of mobile apps created by over 2,500,000 businesses and developers (app makers). There are been over 3,000,000 apps built and over 150,000 apps published on app stores and monthly visitors on mobile exceed 2.5 million.
